ARRAY IMPLEMENTATION OF QUEUE**Question:**

To simulate the working of a queue of integers using an array with the following operations: (a) Insert (b) Delete (c) Display (d) queue full (e) queue empty

Algorithm:

1. Start.
2. Initialize max =5, front=rear=-1.
3. Create an array of size max.
4. Create a function to insert an element to queue as:

```

if(rear==Max-1)

    cout<<"\n Queue is full"<<endl;

else{cout<<"\n\n Enter the element for insertion: ";

cin>>item;

rear=rear+1;

q[rear]=item;

cout<<"\n Inserted element is: "<<q[rear]<<endl;}

if(Front==-1) {Front=0; }
      
```
5. Create a function to delete elements from queue as:

```

if(Front==-1){

    cout<<"\n Queue is empty"<<endl;}

else{ item=q[Front];

cout<<"\n Deleted item: "<<q[Front]<<endl;

if(Front==rear)
      
```

```
Front=rear=-1;
```

```
else
```

```
Front=Front+1;
```

6. Then using for loop, display the elements of queue.
7. In main function, use switch case and perform the operations according to user's choice and call the functions to perform the respective operations.
8. End.

Program:

/*To simulate the working of a queue of integers using an array with the following operations: (a) Insert(b) Delete (c) Display(d) queue full (e)queue empty*/

```
#include <iostream>
```

```
#include<stdlib.h>
```

```
#define Max 5
```

```
using namespace std;
```

```
int item, n, a;
```

```
int Front=-1, rear=-1;
```

```
int q[Max];
```

```
void addq(int item)
```

```
{
```

```
    if(rear==Max-1)
```

```
        cout<<"\n Queue is full"<<endl;
```

```
    else{
```

```
    cout<<"\n\n Enter the element for insertion: ";
    cin>>item;
    rear=rear+1;
    q[rear]=item;
    cout<<"\n Inserted element is: "<<q[rear]<<endl;
}
if(Front==-1){
    Front=0;
}
}
void delq(int item)
{
    if(Front==-1){
        cout<<"\n Queue is empty"<<endl;}
    else{
        item=q[Front];
        cout<<"\n Deleted item: "<<q[Front]<<endl;
        if(Front==rear)
            Front=rear=-1;
        else
            Front=Front+1;
    }
}
void display()
```

```
{
    cout<<"\n The Queue elements are: ";
    for(int i=Front;i<=rear;i++){
        cout<<q[i]<<" ";
    }
}

int main()
{
    x:

    cout<<"\n Operation to be done:\n 1.Enqueue.\n 2.DeQueue. \n 3.Display. \n
4.exit.\n";

    cout<<"\n Enter your choice(1-4): ";

    cin>>n;

    switch(n){
case 1:
        addq(item);

        goto x;

        break;
case 2:
        delq(item);

        goto x;

        break;

case 3:
```

```
display();
```

```
goto x;
```

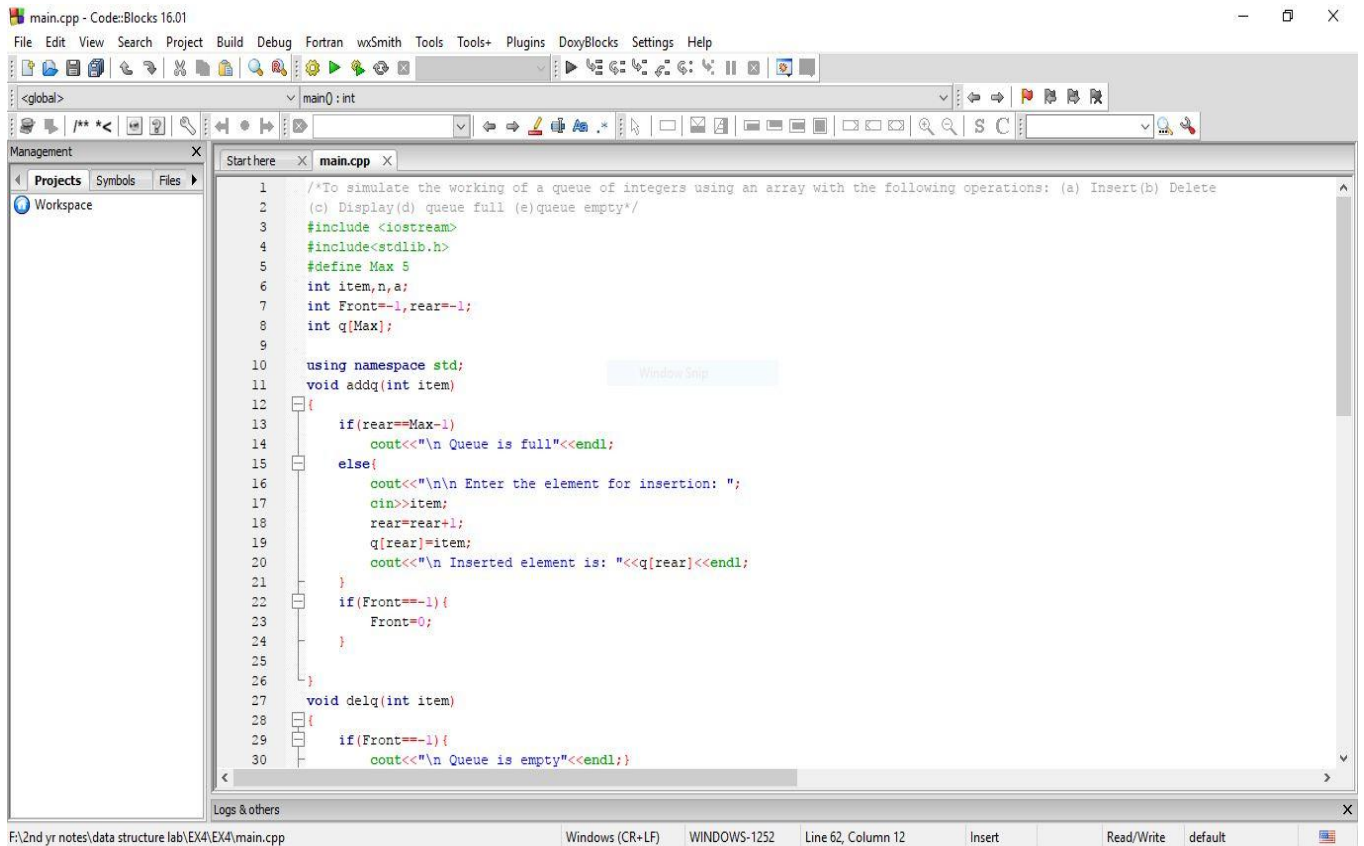

```
break;
```

case 4:

```
exit(0);
```

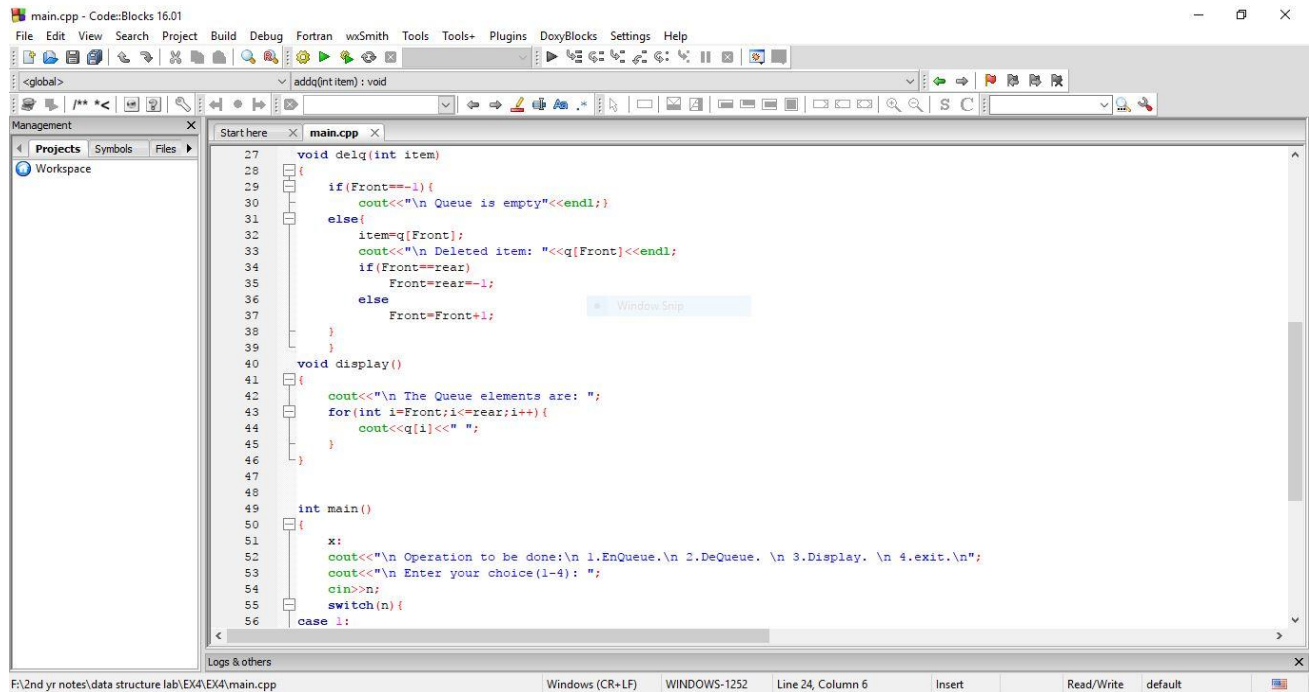

```
}}
```

Output:

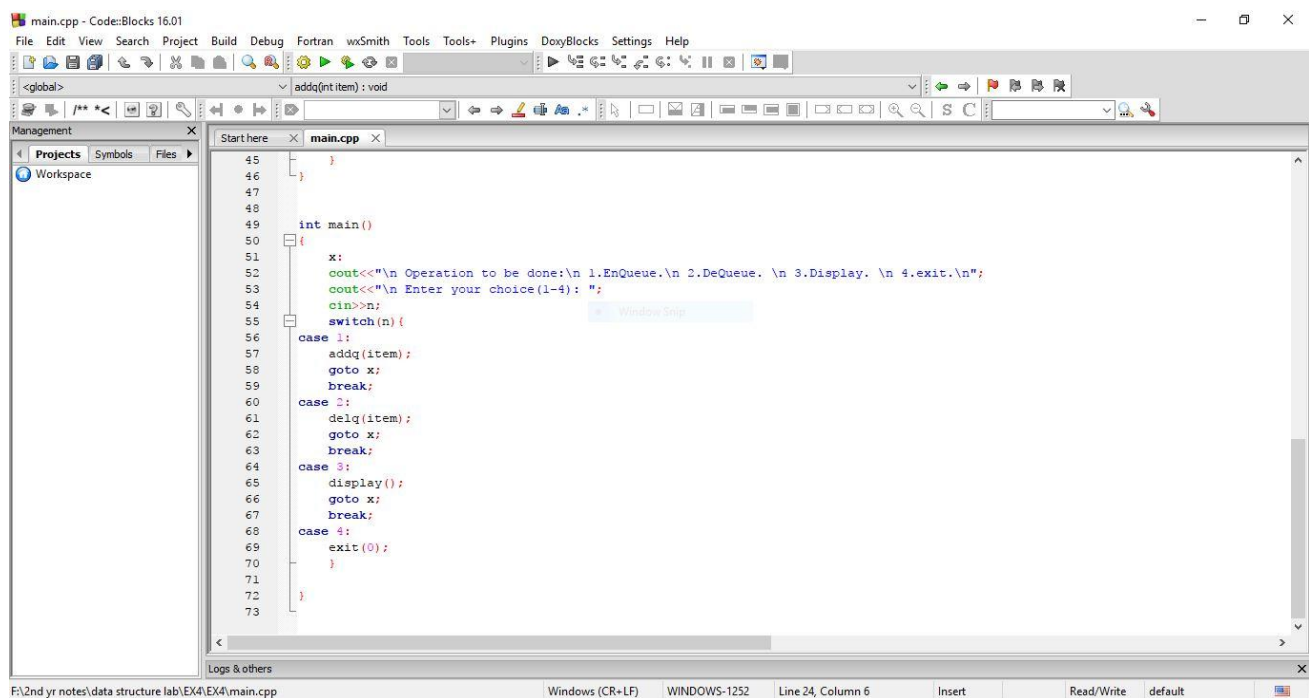

```
